ETA 3043.2016

Issue Date: May 11, 2016

This ETA is revised annually to provide updated rates.

Low-Density Light and Power Utility Deduction

Background

RCW 82.16.053 provides a public utility tax deduction for light and power businesses having seventeen or fewer customers per mile of distribution power lines. It applies only to those light and power businesses with retail power rates that exceed the state average power rate.

Calculations

The allowable deduction is equal to the lesser of the result obtained from two calculations and is limited to \$400,000 a month. The first calculation is based on wholesale power costs paid by the utility, and the second calculation is based on the percentage by which the average retail electric power rates for the light and power business exceed the statewide average electric power rate. The required calculations under the two methods are as follows.

The first calculation:

- a) Calculate fifty percent of the wholesale power cost paid during the reporting period, if the business has fewer than five and one-half customers per mile of distribution line; or
 - b) Calculate forty percent of the wholesale power cost paid during the reporting period, if the business has more than five and one-half but less than eleven customers per mile of distribution line; or
 - c) Calculate thirty percent of the wholesale power cost paid during the reporting period, if the business has more than eleven but less than seventeen customers per mile of distribution line.

The second calculation:

d) Calculate the percentage by which the average retail electric power rate for the light and power business exceeds the state average electric power rate. Multiply this percentage by the wholesale power cost to the business. If more than fifty percent of the kilowatt-hours are sold to irrigators, then only sales to nonirrigators are to be used to calculate the average electric power rate.

If the utility business has more than seventeen customers per mile of distribution line, no deduction may be taken. If the utility business has seventeen or fewer customers per mile of distribution line, the deduction will be the lesser of the amounts calculated under method one and method two, but not to exceed \$400,000 in any month.

**State average
electric power
rate**

The state average electric power rate to be used in the second calculation is as follows:

<u>Period</u>	<u>Rate per kW</u>
7/1/16-6/30/17	7.19 cents
7/1/15-6/30/16	7.33 cents
7/1/14-6/30/15	7.01 cents
7/1/13-6/30/14	6.83 cents
7/1/12-6/30/13	6.70 cents
7/1/11-6/30/12	6.72 cents

The law requires the Department of Revenue to determine the state average electric power rate each year based on the most recent available data and to make this rate available to these businesses. The Department will revise this advisory annually and the rate will be applied on a fiscal year ending on June 30. The rate is based on the most recent data for the previous calendar year obtained from the Federal Energy Information Administration, Office of Coal, Nuclear, Electric and Alternate Fuels, U.S. Department of Energy.
